

Scambiatori a Piastre Saldobrasate

Brazed Plate Heat Exchangers

EMMEGI

APPLICAZIONI:

APPLICATIONS :

- Recuperi Termici da Processi Industriali / Industrial Process Heat Recovery
- Refrigeratori Olio / Oil Coolers
- Impianti Fotovoltaici / Photovoltaic Installations

Scambiatori a Piastre Saldobrasate

Brazed Plate Heat Exchangers

Vantaggi degli scambiatori a piastre saldobrasate

- Alto coefficiente di scambio termico ;
- Dimensioni contenute con alte performance ;
- Alta resistenza alla pressione e temperatura ;
- Connessioni in AISI 321 ;
- Facile installazione ;

Gli scambiatori a piastre sono costituiti da piastre corrugate.

Le piastre sono ruotate di 180° l'una dall'altra al fine di creare un reticolo di canali intersecati. I fluidi possono fluire sia in controcorrente che equicorrente.

Le piastre sono unite insieme tra loro con materiale brasante in speciali forni sottovuoto.

La speciale corrugazione permette al fluido di turbolare aumentando lo scambio termico e riducendo i depositi di sporco nelle piastre.

Advantages of Brazed Plate Heat Exchangers

- high heat transfer coefficient ;
- small unit size with high heat transfer capacity ;
- high resistance to pressure and temperature fluctuations ;
- stainless steel connections ;
- easy installation ;

Brazed plate heat exchangers consist of stainless steel plate packs, which have embossed chevron patterns.

The plates are turned 180° to each other, causing the plate ridges to intersect, and creating a lattice of intersecting channels. The fluids can flow in counter-current or co-current way.

The entire construction is sealed together by the means of brazing in a special vacuum furnace.

Special corrugation patterns promote high turbulence flow. Turbulence dramatically improves heat transfer rates and reduces the amount of deposits inside the unit.

Flow Channel Diagram in Heat Exchanger

one-pass - channels are parallel
